#### DETAILED ACTION

1. Claims 1-17 are presented for examination.

2. Claims 1 and 12 are amended.

3. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/16/2008 has been entered.

## The New Grounds of Rejection

Applicant's amendment and argument with respect to claims 1-17 filed on 7/16/2008
have been fully considered but they are deemed to be moot in views of the new grounds
of rejection.

# Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

## Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action: Application/Control Number: 10/807,514

Art Unit: 2153

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 3

- Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over, Moshfeghi
  et al., US Patent Number 6,076,166 hereinafter Moshfeghi, in views of Ji et al., US Patent
  Number 5,623,600, hereinafter Ji.
- Referring to claim 1, Moshfeghi teaches a method of assuring the quality of data being transmitted in response to a client request (Col 1 lines 36-41), the method comprising:
  - a data provider (web server) receiving a request for client requested data over the internet from a client (client 16)(figure 1, Col 2 lines 26-30, Col 1 lines 11-15, web server receives request from client);
  - b. obtaining said client requested data, in response to said request, at said provider (Col 2 lines 30-36);
  - c. transmitting said obtained data to said client (Col 7 lines 28-31).

Moshfeghi does not teach responsive to said request and before providing said obtained client requested data to said client, performing a quality assurance procedure at said data provider on said obtained client requested data to indicate whether said obtained client requested data is corrupted in order to assure the quality of said obtained client requested data, and if said quality assurance procedure does not indicate that said obtained client requested data is corrupted, then transmitting said data responsive to said quality assurance procedure; and if said quality assurance procedure indicates that said obtained client requested data is corrupted, then not transmitting said obtained client requested data.

Ji teaches virus scanning on the requested data prior to the file transferring, and transferring the file from the system to the recipient if the file does not contain a virus and delete the file if the file contains virus (abstract).

It would have been obvious to a person with ordinary skill in the art at the time the invention was made to have the client requested data of Moshfeghi to be quality assured by the service provider as taught by McLaughlin, because both Mishfeghi and Ji discloses service providers for providing data to the clients, and Ji further performs virus scanning (quality assurance) prior to the transfer.

A person with ordinary skill in the art would have been motivated to make the modification to Moshfeghi because having the requested data to be quality assured before transmitting would assure the data quality of the data before provided by the service provider.

- Referring to claim 2, Moshfeghi teaches the method according to claim 1, wherein said
  performing a quality assurance procedure comprises comparing said data to said request
  (Ji, Col 7 lines 19-28).
- 10. Referring to claim 3, Moshfeghi teaches the method according to claim 1, wherein said performing a quality assurance procedure comprises comparing said obtained client requested data to stored data (Ji, Col 7 lines 19-28).
- 11. Referring to claim 4, Moshfeghi teaches the method according to claim 1, wherein said performing a quality assurance procedure comprises checking an electronic signature associated with said obtained client requested data (Col 3 lines 58-65).

Application/Control Number: 10/807,514

Art Unit: 2153

12. Referring to claim 5, Moshfeghi teaches the method according to claim 1, wherein said performing a quality assurance procedure comprises checking a limited usage-code associated with said obtained client requested data (Col 3 lines 58-65).

Page 5

- 13. Referring to claim 6, Moshfeghi teaches the method according to claim 1, wherein said performing a quality assurance procedure comprises checking a one-way hash function of said obtained client requested data (Col 2 lines 26-57).
- 14. Referring to claim 7, Moshfeghi teaches the method according to claim 1, wherein said performing a quality assurance procedure comprises analyzing a content of said obtained client requested data against a preexisting value (Col 2 lines 43-45).
- 15. Referring to claim 8, Moshfeghi teaches the method according to claim 1, further comprising transmitting a message when said quality assurance procedure indicates that s said obtained client requested data is corrupted (Col 6 lines 55-58).
- 16. Referring to claim 9, Moshfeghi teaches the method according to claim 9, further comprising receiving said obtained client requested data by a user of said obtained client requested data; and second performing a quality assurance procedure on said obtained client requested data, at said user (Col 7 lines 28-31, user is viewing the retrieved data).
- 17. Referring to claim 10, Moshfeghi teaches the method according to claim 9, wherein said second performing a quality assurance procedure comprises checking a digital signature of said obtained client requested data (Col 7 lines 28-31, user is viewing the retrieved data).

Application/Control Number: 10/807,514

Art Unit: 2153

18. Referring to claim 11, Moshfeghi teaches the method according to claim 1, wherein said performing a quality assurance procedure comprises calculating a checksum for said obtained client requested data (Col 3 lines 5—65, data integrity).

Page 6

- Referring to claim 12, Moshfeghi teaches a method of data transmission (Col 1 lines 36-41) comprising:
  - a. receiving a request for data over the internet from a client (figure 1, Col 2 lines 26-30, Col 1 lines 11-15, web server receives request from client);;
  - b. obtaining data, in response to said request, at said provider (Col 2 lines 30-36);
  - c. transmitting said obtained data to said client (Col 7 lines 28-31).

Moshfeghi does not teach responsive to said request and before providing said obtained client requested data to said client, performing a quality assurance procedure at said data provider on said obtained client requested data to indicate whether said obtained client requested data is corrupted in order to assure the quality of said obtained client requested data, and if said quality assurance procedure does not indicate that said obtained client requested data is corrupted, then transmitting said data responsive to said quality assurance procedure; and if said quality assurance procedure indicates that said obtained client requested data is corrupted, then not transmitting said obtained client requested data.

Ji teaches virus scanning on the requested data prior to the file transferring, and transferring the file from the system to the recipient if the file does not contain a virus and delete the file if the file contains virus (abstract).

It would have been obvious to a person with ordinary skill in the art at the time the invention was made to have the client requested data of Moshfeghi to be quality assured by the service provider as taught by McLaughlin, because both Mishfeghi and Ji discloses service providers for providing data to the clients, and Ji further performs virus scanning (quality assurance) prior to the transfer.

A person with ordinary skill in the art would have been motivated to make the modification to Moshfeghi because having the requested data to be quality assured before transmitting would assure the data quality of the data before provided by the service provider.

- 20. Referring to claim 13, Moshfeghi teaches the method according to claim 12, wherein said performing a quality assurance procedure comprises checking an electronic signature associated with said data (Col 3 lines 58-65).
- 21. Referring to claim 14, Moshfeghi teaches the method according to claim 12, wherein if said quality assurance procedure indicates that said obtained data is corrupted, then obtaining back up data (figure 2, Col 6 lines 49-58).
- Referring to claim 15, Moshfeghi teaches a system for data transmission (Col 1 lines 36-41) comprising:
  - a. means for receiving a request for data over the internet from a client (figure 1, Col 2 lines 26-30, Col 1 lines 11-15, web server receives request from client);
  - means for obtaining client requested data, in response to said request, at said provider (Col 2 lines 30-36);
  - means for transmitting said obtained data to said client (Col 7 lines 28-31).

Art Unit: 2153

Moshfeghi does not teach responsive to said request, performing a quality assurance procedure at said data provider on said obtained client requested data to indicate whether said obtained client requested data is corrupted in order to assure the quality of said obtained client requested data, and if said quality assurance procedure does not indicate that said obtained client requested data is corrupted, then transmitting said data responsive to said quality assurance procedure; and if said quality assurance procedure indicates that said obtained client requested data is corrupted, then not transmitting said obtained client requested data.

Ji teaches virus scanning on the requested data prior to the file transferring, and transferring the file from the system to the recipient if the file does not contain a virus and delete the file if the file contains virus (abstract).

It would have been obvious to a person with ordinary skill in the art at the time the invention was made to have the client requested data of Moshfeghi to be quality assured by the service provider as taught by McLaughlin, because both Mishfeghi and Ji discloses service providers for providing data to the clients, and Ji further performs virus scanning (quality assurance) prior to the transfer.

A person with ordinary skill in the art would have been motivated to make the modification to Moshfeghi because having the requested data to be quality assured before transmitting would assure the data quality of the data before provided by the service provider.

Application/Control Number: 10/807,514 Page 9

Art Unit: 2153

23. Referring to claim 16, Moshfeghi teaches the method according to claim 15, wherein said performing a quality assurance procedure comprises checking an electronic signature associated with said obtained client requested data (Col 3 lines 58-65).

24. Referring to claim 17, Moshfeghi teaches the method according to claim 15 further comprising: means for obtaining backup data if said quality assurance procedure indicates that said obtained client requested data is corrupted (figure 2, Col 6 lines 49-58).

#### Conclusion

- 25. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Liang-che Alex Wang whose telephone number is (571)272-3992. The examiner can normally be reached on Monday thru Friday, 8:30 am to 5:00 pm.
- 26. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenton B Burgess can be reached on (571)272-3949. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
- 27. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you

Art Unit: 2153

have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
